Dear Godfrey Nalyanya, PhD.,

Pest Management Systems has been practicing IPM since the company was founded in 1984. Our approach to manage the consumer's pest problems is influenced completely by the IPM approach. For years, we have been servicing schools, apartments, food handling facilities, restaurants and homes utilizing the IPM approach. Using IPM in the school environment has proven very beneficial to the school, students, faculty and the PMP.

Concentrating on the inspection process, using corrective measures and limited use of pesticides has produced great results in the reduction of pest problems. Limiting the use of pesticides by only applying them in direct problem areas helps to limit possible exposure to students, faculty and staff. As an extra benefit, it even saves the PMP on chemical cost, but does not sacrifice the effectiveness of the treatment at all when used in conjunction with IPM protocols. We feel that everyone wins with IPM in place.

Sincerely,

Billy Tesh
President
